

Leather-care

REAL
LEATHER

Leather is a natural material, the properties of which are similar to those of human skin. Regular oiling and impregnation is necessary in order to prevent the leather from drying out and fading, whilst ensuring that the surface does not become blotched or brittle.

Before using this bag for the first time, the leather must be oiled and impregnated (oiling may darken the leather).

Regular leather care is recommended – depending on use, this should be carried out at least twice a year. In order to provide protection against damp, dirt and rain marks, we recommend the additional use of a COLLONIL impregnation spray (www.collonil.net) with or without nanoparticles. This helps to keep the leather soft, smooth and breathable.

The more natural the leather is, the more sensitive it is to light and heat.

Please keep leather away from sources of heat, such as radiators, and avoid exposure to direct sunlight as far as possible.
